SYNC

Project Udyam Digital

Making small businesses go digital in one sitting

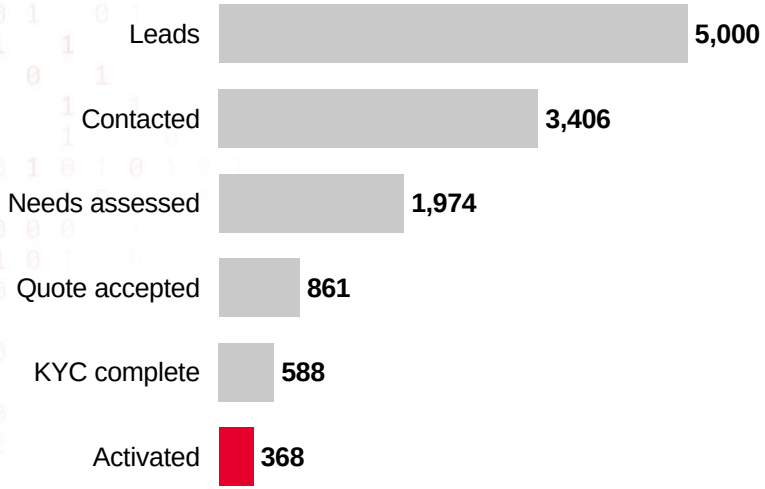

Team TeamCracker

Airtel Sync 2026 – Digital Track | Enterprise Track A

Platform Partner unstop

Only 7% of SMB leads activate, and most of the loss can be removed digitally

Funnel, Apr–Jun 2026 (5,000 leads, Tier 1–2)

Activation: 9.6% with GSTIN vs 2.0% without. Today: 17.6 days, 3 status chases, ₹15,053 per activated SMB.

827 — **lost to the sales visit**
"No time for a visit" (531) and "visit not scheduled" (296)
→ **Remove the visit: advise on the phone**

385 — **lost to slow or confusing quotes**
Quote too complex (206), quote took too long (179)
→ **One instant, plain-language price**

273 — **lost to paperwork**
Missing document (94), paperwork too long (79), signatory (53), mismatch (47)
→ **Smart KYC: look up first, upload only gaps**

One conversation from first question to live service, in a phone and a few taps

1 Advise

Web chat in ten Indian languages (WhatsApp and voice next). Asks 4–5 questions (type, staff, sites, current internet) and recommends a bundle with the “why” in plain words.

2 Quote & checkout

One monthly price, setup fee shown up-front, add-ons toggled live. A rules engine, not the LLM, enforces city tier, size, GSTIN and product dependencies.

3 Smart KYC

Consent first, then GSTIN/Udyam lookup. OCR reads tilted photos and checks status, names and bill age ≤ 90 days. A cancelled GST limits GST products; it does not block the order.

4 Track

Pay by UPI or card (Razorpay), then a live tracker: verified, install scheduled with ETA, live. No chasing calls; a human handoff is one tap away.

Field force & partners

Do not compete, they accelerate. Leads the advisor cannot close arrive with the full chat summary and a propensity score.

Partners take install and high-touch segments (multi-site, manufacturers) and are credited for digitally originated orders.

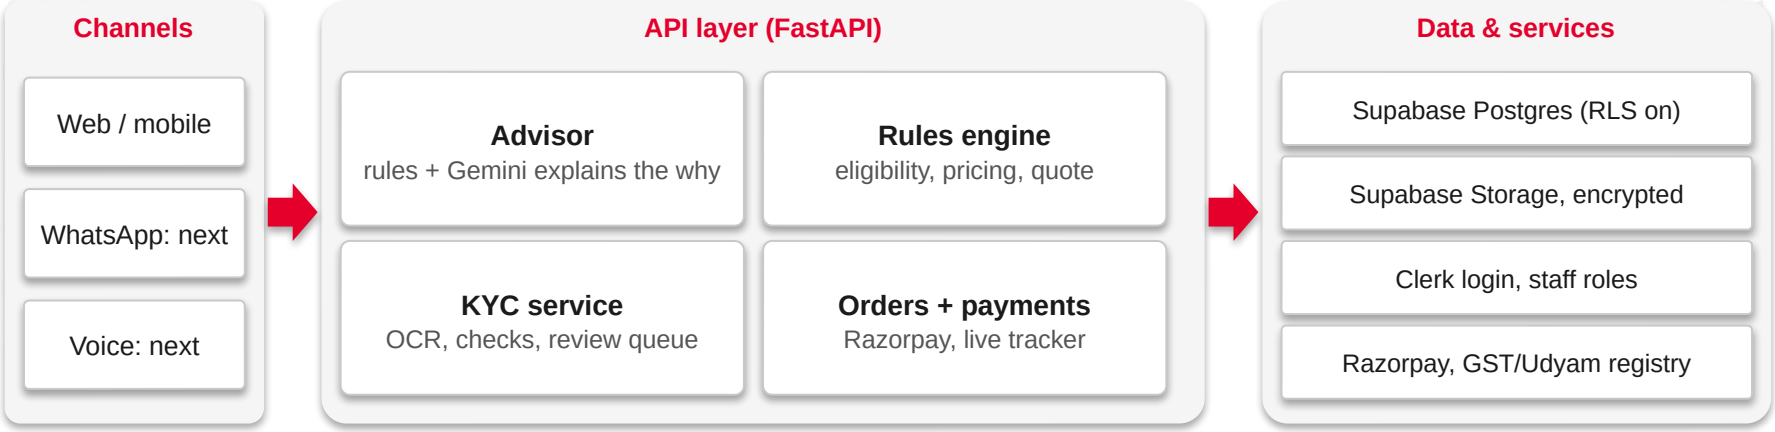

Start with professional offices, then extend to micro retail with a lighter starter bundle

Wave / segment	Share of SMBs	Activation today	Bundle from catalogue	Monthly price
1. Professional offices (clinic, CA, coaching)	25%	11.1%	Udyam Pro: Biz Fibre 300, failover, cloud email ×5, backup, endpoint security ×5, 2 SIMs, CCTV ×2	₹4,600–6,000 + ₹5,100 setup
2. Micro retail & services (kirana, salon, pharmacy)	55%	4.1%	Udyam Start: 5G AirFiber 100, business SIM, Cloud POS & billing, CCTV ×1	₹2,000–2,700 + ₹4,300 setup
3. Small multi-site	15%	11.0%	Udyam Network: fibre, secure Wi-Fi and CCTV per site; SD-WAN for 3+ sites	Per site; typical ₹28k today
Partner-led: manufacturers	5%	12.8%	Leased line, managed firewall, machine IoT; digital quote, partner installs	Typical ₹16k today

Why this order: professional offices activate at 2.7× the rate of micro retail (11.1% vs 4.1%), already buy larger bundles (median ₹6.6k) and value uptime and data security. Micro retail is 55% of leads, so a cheaper starter bundle matters for scale.

Pricing rule: catalogue range, lower end for longer commitment or 3+ products. Leads without GSTIN (29%) see only the 15 products they are eligible for, so no dead-end quotes.

Rules decide price and eligibility, GenAI handles the conversation, privacy is built in

Privacy and security by design (DPDP Act, 2023)

- Consent first: purpose-specific screen before any KYC, logged and withdrawable
- Minimise: registry lookup first; documents only for what it cannot confirm
- Masked IDs; Gemini sees only the business profile, never IDs or images
- Encrypted files in a private bucket; rejected documents deleted in 30 days

Nobody sells the whole small-business stack, with advice and KYC, in one digital sitting

Capability	Udyam Digital	Telco peers	Digital-first point products	Local resellers / ISPs
Full stack (connectivity, voice, cloud, security, IoT)	Yes	Yes	No	Partial
Instant online sign-up	Yes	Partial	Yes	No
Guided advice to the right bundle	Yes	No	No	Partial
Near-instant KYC (lookup + OCR)	Yes	Partial	Partial	No
One bill, one tracker, one support number	Yes	Partial	No	No
Local trust and install network	Partial	Yes	No	Yes

Our edge: the only journey that goes advice → priced bundle → KYC → tracked activation on a phone, and it turns the field force and channel partners into an accelerator instead of a bottleneck.

Indicative view from public positioning and the case brief; to be validated with market research.

Target: activation from 7.4% to about 12.6% and acquisition cost from ₹15k to about ₹7k

Metric	Today	6-month target
Lead → activation	7.4%	≥ 12%
Time to activate	17.6 days	≤ 7 days
Status-chase calls	3	≤ 1
Acquisition cost / activated SMB	₹15,053	≤ ₹8,000
6-month churn	15%	≤ 12%

How we get there: stage conversion improves 68→72%, 58→64%, 44→50%, 68→78%, 63→70%. On the same 5,000 leads that is about 630 activations (vs 368) and, with spend down ~20%, about ₹7k each.

Model assumptions, to be validated in pilot.

Rollout and status

Months 0–3: professional offices, Tier 1, web, Hindi and English

Months 3–6: micro starter bundle, WhatsApp and voice front ends

Months 6–12: multi-site and manufacturers with partners

Built now: working prototype on Supabase, Clerk and Razorpay (test mode); 65 automated tests; all 12 specimen applicants handled.

Key risks and mitigations

LLM quotes a wrong price: rules engine owns price and eligibility

OCR error or fraud: registry cross-check, human review queue

Channel conflict: partner credit for digital orders

DPDP exposure: consent log, retention limits, masked IDs
